On Jan 26, 2002 this sequence version replaced gi:18201765.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >- 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (24-FEB-2001) Lita Annenberg Hazen Genome Sequencing Center, Cold Spring Harbor Laboratory, 1 Bungtown Road, Cold Spring Harbor, NY 11724, USA

Ny 11724, USA
On Jan 26, 2002 this sequence version replaced gi:18201765.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such one plasmid subclone or more than one Mill subclone; and the assembly was confirmed by restriction digest.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 12 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

* NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 5 contigs. The true order of the pleces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

2893: contig of 2893 bp in length

NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently
consists of 9 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Submitted (24-AUG-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                         This cDNA clone encodes novel mouse secretory peptide-9, or 2sig9
( (see AAW88476), an orthologue of novel human 2sig9 (see AAW88469).

CHUMAN Zsig9 is overexpressed in a number of tumours including brain, liver, lung, oesophageal, stomach, colon, rectal, thyroid and lymphoma tumors, and thus can be used as an indicator for cancer. The invention provides polynucleotides (see AAW88469-70) including mature polypeptides, other processed forms, variants and the mouse orthologues. The Zsig9 gene, or probes derived from it, can be used to determine if zsig9 is present on chromosome 10, and if a mutation has occurred. Antibodies raised against 2sig9 can be used as diagnostic agents to determine the presence of zsig9, and thus the presence of cancer. They can also be labelled with radioisotopes or fused with toxins and used to treat tumours which overexpress 2sig9. Antisense nucleotides derived from Zsig9 colarents, heart or liver
                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                              The present DNA sequence is an ortholog encoding the secretory protein-9, 28199 derived from mouse. It is overexpressed in tumours. Antagonists, and treating tumours. The antagonist may be an antibody or receptor to 28199 and it may be radio-labelled or fused to a polypeptide toxin. It sequence can be used for down regulating the overexpression of 28199. The gene The 28199 sequence facilitates improved diagnostic and therapeutic techniques for detecting and treating cancers, especially of the brain, it sequences to detecting and treating cancers, especially of the brain, it is supposed to detect the province of the province of the brain, 28199.

                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                   PRO polypeptides. The PRO polypeptides are useful to detect other CC PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing CC PRO polypeptides, and to detect the presence of mammalian lung, colon, CC breast, prostate, rectal, cervical or liver tumours by comparing PRO CC polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the CC come of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the CC control teration or differentiation of chondrocytes, the proliferation or cc control teration of inner ear utricular supporting cells or CC cartilage, the proliferation of inner ear utricular supporting cells or T-lymphocytes, the release of a cytokine from peripheral blood cc monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides and modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide consecutes involved in binding interactions. The polypuclectides encoding CC molecules involved in binding interactions. The polypuclectides encoding CC to factor vira. The PRO polypeptides can be used in gene therapy.
                                                                                                                                                                                                                                                                                  Query Match
